

the "BAG-A-THON" Packager

A BAG OPENING & FILLING MACHINE

The "Bag-A-Thon" Packager is the extra pair of hands needed in your bagging section! It literally holds the bag rigid so that an operator simply inserts the product into the bag and with the same motion removes the filled bag. The next bag pops open automatically waiting to be filled by operator.

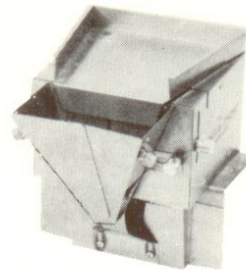

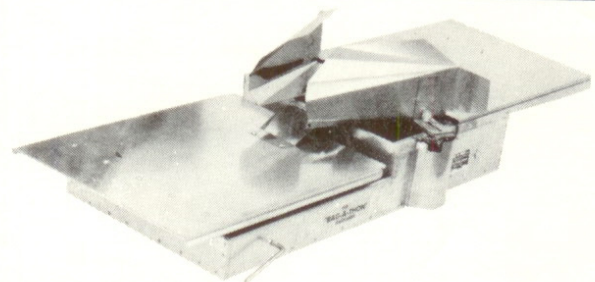

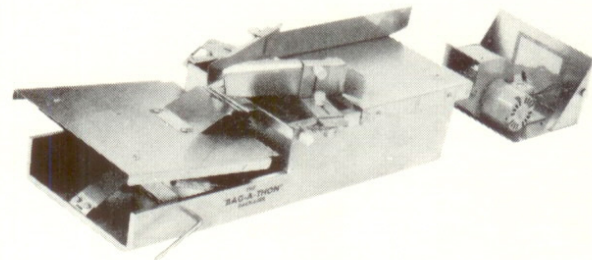

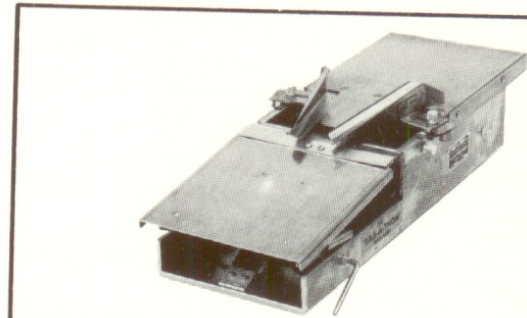

The "Bag-A-Thon" Packager can be used by small and large plants alike! The small plant needs this equipment so that operators are free to do other work in plant and the large firm can set up bagging sections anywhere so as not to interfere with existing plant machinery.

The "Bag-A-Thon" Packager can be used with virtually any solid product on the market. It can be used both vertically and horizontally and has a versatility that will amaze you as it is used in your own plant! The production rate is dependent upon feed, will run to 35 packages per minute!

All "Bag-A-Thon" Packagers are custom-made for your products and have all product-contact parts made of all stainless steel. The body chassis of the machine is made of heavy aluminum or stainless steel. Your need determines the model, size, construction and the price.

Power: 115 volts/60 cycles a.c. 1-2 amps
